Date: 2 September 2019

Dear Colleagues

UPDATE OF GUIDANCE ON CLEARANCE AND MANAGEMENT OF HEALTHCARE WORKERS LIVING WITH A BLOODBORNE VIRUS (BBV)

ACTION REQUIRED

HSC Trust Chief Executives should ensure that this information is cascaded to all healthcare workers, and in particular drawn to the attention of Consultants in GUM, Consultant virologists, Consultant Hepatologists and Occupational Health Physicians.

HSCB should ensure that this information is cascaded to all General Practitioners, Practice Managers, and General Dental Practitioners for onward distribution to all relevant primary care staff.

Healthcare workers (HCWs) living with Hepatitis B (HBV)

The guidance on restrictions of HCWs living with HBV to perform exposure-prone procedures (EPPs) has been updated. Previous guidance published in October 2017 restricted the practice of HCWs living with HBV if they were e-Antigen (HBeAg) positive and/or they had a pre-treatment viral load of >20,000 IU/mL (10^5 gEq/ml).

<https://www.health-ni.gov.uk/sites/default/files/publications/health/hss-md-28-2017.pdf>

These restrictions are now being removed provided HCWs meet the criteria for clearance and comply with monitoring by an Occupational Health service, as described in the updated guidance published by the UK Advisory Panel for Healthcare Workers Infected with Blood-borne Viruses (UKAP). This change is due

to the lower risk of virus transmission with new effective treatments which are now available for HBV.

In addition, these HCWs living with HBV who wish to perform EPPs need to be registered on a confidential national register, the UKAP-OHR (*UK Advisory Panel for Healthcare Workers Infected with Blood-borne Viruses – Occupational Health Monitoring Register for BBV Infected HCWs*). The UKAP-OHR will be managed by Public Health England (PHE). Further information about how to register HCWs onto the UKAP-OHR as well links to the updated guidance can be found at:

<https://www.gov.uk/government/groups/uk-advisory-panel-for-healthcare-workers-infected-with-bloodborne-viruses>

Changes to recommendations regarding 'lookback' / patient notification exercises

Previous guidance recommended a series of investigations following the diagnosis of a BBV (i.e. HIV, HBV and Hepatitis C (HCV)) in a HCW who had undertaken (exposure prone procedures) EPPs; these included;

- i) lookback initiatives to identify procedures undertaken by the HCW,
- ii) the cross-matching of resultant records with databases holding records of people diagnosed with BBVs to determine if any procedures had led to a subsequent diagnosis of a BBV and, where appropriate,
- iii) patient notification exercises involving the provision of information and the offer of BBV screening to those patients deemed at risk.

A review by UKAP found that, in instances where a HCW was identified as BBV infected but there was no initial evidence of HCW to patient transmission, patient notification exercises never identified any such transmissions. Furthermore, such investigations are resource-intensive and patient notification often cause anxiety among those contacted.

As a result of this review, the criteria for undertaking a detailed public health investigation and patient notification have been revised and these will now only be undertaken in circumstances where it is known (or suspected) that a patient has acquired infection from a HCW or where there is concern about the practice of the HCW which could have led to increased risk of exposure.

The changes described above are important in ensuring that the management of HCWs living with BBVs is proportionate, reflects the changing treatment options now available and our understanding of the long-term aspects of living with these infections, and at the same time ensures that patient safety is not compromised.

I hope that the removal of restrictions on EPP practice and the recommendation that patient notification/lookback exercises are only undertaken in exceptional circumstances will reassure HCWs and mean that they feel confident to seek advice and testing for BBVs, if they are concerned about exposures either in the workplace or in other settings.

I would also like to take this opportunity to remind everyone of the very considerable benefits of identifying and then treating a BBV. Treatments for HBV (if required) and HIV are generally safe, easy to take and highly effective in suppressing virus. For HCV, a short course of treatment is safe, easy to take and, for almost everyone, curative.

Further information about the contents of this letter can be obtained through the link above or by contacting UKAP (Ukap@phe.gov.uk). Local queries regarding the guidance can also be directed to Dr Gillian Armstrong at the Department of Health, Northern Ireland at gillian.armstrong@health-ni.gov.uk.

Yours sincerely

Dr Michael McBride
Chief Medical Officer

Prof Charlotte McArdle
Chief Nursing Officer

Mr Simon Reid
Chief Dental Officer

CIRCULATION LIST

Executive Medical Director/Director of Public Health, Public Health Agency
(for onward distribution to all relevant health protection staff)

Assistant Director Public Health (Health Protection), Public Health Agency

Director of Nursing, Public Health Agency

Family Practitioner Service Leads, Health & Social Care Board
(for cascade to GP Out of Hours Services)

Medical Directors, HSC Trusts

(for onward distribution to all Consultants, Occupational Health Physicians and School Medical Leads)

Nursing Directors, HSC Trusts

(for onward distribution to all Community Nurses and Midwives)

RQIA *(for onward transmission to all independent providers including independent hospitals – for registered dentist providers in private practice only that are not on the HSCB Dental List)*

Professor Donald Burden, Centre Director of Dental School, QUB, and Clinical Director for Dentistry BHSCT

Professor Pascal McKeown, Acting Dean and Head of School of Medicine, Dentistry and Biomedical Sciences, QUB

Professor Donna Fitzsimons, Head of School of Nursing and Midwifery, QUB

Professor Sonja McIlpatrick, Head of School of Nursing, University of Ulster (UU)

Professor Keith Gardiner, Chief Executive, NIMDTA

(for onward distribution to Postgraduate Deans)

Angela McLernon, Chief Executive, NIPEC

Donna Gallagher, Open University

This letter is available on the Department of Health website at
