Dear Colleagues,

**FURTHER SERIOUS SHORTAGE PROTOCOLS – PENICILLIN V**

Serious shortage protocols (SSPs) under the Human Medicines Regulations 2012 (HMRs) are an additional tool to manage and mitigate medicines shortages. An SSP enables community pharmacists to supply a specified medicine in accordance with a protocol rather than a prescription, without needing to seek authorisation from the prescriber, saving time for patients, pharmacists and prescribers. They are used in the case of a serious shortage, where a medicine would be likely to be out of stock for some time, and if, in the opinion of ministers, it would help manage the supply situation.

Further to my letter of 15 December, in which I advised that the Department of Health and Social Care (DHSC) has developed three SSPs for phenoxymethylpenicillin preparations to help ensure that patients are able to access the treatment they need, I can advise that a further five SSPs have now been issued. These SSPs will allow community pharmacists to consider different oral antibiotic preparations to enable the continued supply of antibiotics to patients and mitigate the ongoing supply disruptions affecting phenoxymethylpenicillin. As before, these additional five SSPs apply in all parts of the UK and have an expiry date of **31 January 2023.**

**SSP043 - SSP047** have been authorised by the Secretary of State to provide pharmacists with procedures to follow in providing **suitable alternative oral antibiotics** to substitute Phenoxymethylpenicillin. The protocols aim to help reduce the number of
patients needing to return to their prescriber for a replacement prescription. For each SSP, DHSC has included specific patient counselling points which must be considered when deciding whether supply in accordance with an SSP is suitable for a patient.

Before supplying an alternative antibiotic, the pharmacist must firstly consider if a suitable supply can be made by using an alternative formulation of Phenoxymethylpenicillin in accordance with the relevant SSP (SSP040 - SSP042). Where that is not possible only specified antibiotics can be substituted for prescriptions for duration of no longer than 10 days, in order of preference depending on availability and the dosing needs for the patient (see specific SSP for details).

Details on these SSP’s are available on the Business Services Organisation (BSO) dedicated page on its website - [www.hscbusiness.hscni.net/services/3063.htm](http://www.hscbusiness.hscni.net/services/3063.htm)

Please note that reference in these SSPs (SSP043 - SSP047) to notifying GPs within 24 hours of supply and the ‘Addendum – Supporting information on notifying other healthcare professionals’ does not apply in Northern Ireland. Pharmacists in Northern Ireland should refer to the existing SSP operational guidance on the BSO website.

Community pharmacists should use their professional skill and judgement to decide whether it is reasonable and appropriate to substitute the patient’s prescribed order for a supply under these active SSPs. The patient/carer will also need to agree to supply under the SSP.

Should the quantity on the prescription be unclear, the pharmacist should consult with the patient and use their professional judgement to make an appropriate supply under these SSPs. Pharmacists should refer to the relevant Summary of Product Characteristics (SPC) and Patient Information Leaflets (PIL) to inform these decisions.

If a patient/carer declines to receive the medicine under these SSPs, the pharmacist should use their professional judgement to determine if other courses of action are appropriate whilst taking into consideration wider supply issues. If this does not address their concerns, the patient/carer should be referred back to their prescriber for advice.

**Action Required**

All relevant staff should be made aware of these SSP’s. I would ask the SPPG to bring this information to the attention of GP Practices and Community Pharmacists directly.

Yours sincerely,

Cathy Harrison
Chief Pharmaceutical Officer
